- Continuous monitoring

REGULATORY COMPLIANCE

- Policy management
- Control management
- Business process automation
- Reporting
- Document and policy management
- Non-conformance and CAPA management
- Change control
- Audits and inspections

“Coruson enables us to centralise all aspects of safety reporting and quality auditing and allows us to increase levels of proactive risk management. The software provides us with quick access to all safety data via one system and gives us an immediate synopsis of business performance.”

Captain Ling Liong Tien,
Group Head of Safety, AirAsia

“The software empowers our staff. Once they identify risks and hazards they now have a system where they can raise them in a very simple way into the IT system. So they can register those risks and hazards.”

Stephen Atkinson,
Group Head of Business Improvement and Sustainable Development,
HAECO Group

Enterprise software built for the cloud, our flagship safety and risk management product Coruson is designed for large organisations that demand the ultimate user experience, a rapid return on investment and support from a vendor with decades of domain experience.

Coruson employs a risk-based model to modernise business processes and drive productivity and performance. We understand that enterprises don't want silos. Coruson is designed for the maturity journey to integrated risk management. While your initial requirement might be to deploy Coruson as a safety management solution and your focus might be regulatory compliance, safety reporting or supplier risk, we understand that the bigger picture is a journey to holistic risk management across your organisation.

At Ideagen we constantly invest in both our overall technology strategy and the specific roadmap of each product, including Coruson. The completeness of the features and functions means that Coruson has all the safety and risk management tools your organisation will ever need. This means that you can grow into it with Ideagen here to support you as your maturity journey unfolds in the years ahead, allowing your organisation and culture to develop and become more accountable and mature.
